

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A stereomicroscope comprising:
 - an objective (2) having an optical axis extending substantially vertically;
 - a zoom system (7) downstream of the objective; and
 - a deflector element (5) between the objective (2) and the zoom system (7) for deflecting observation beams emerging from the objective (2) into corresponding magnification or observation channels of the zoom system (7);

wherein the zoom system (7) includes at least three substantially horizontally extending magnification or observation channels (7a, 7b, 7c, 7d).
2. (currently amended) The stereomicroscope according to Claim 1, wherein the zoom system (7) has four magnification or observation channels (7a, 7b, 7c, 7d).
3. (canceled)
4. (currently amended) The stereomicroscope according to ~~Claim 3~~ Claim 1, wherein the zoom system (7) has four magnification or observation channels, and two of the magnification or observation channels (7a, 7b) of the zoom system (7) extend horizontally at the same height and two of the magnification channels (7c, 7d) of the zoom system extend horizontally at a vertical spacing from one another.
5. (currently amended) The stereomicroscope according to Claim 1, further comprising another deflector element (9) downstream of the zoom system for deflecting fewer than all of the observation beams (20a, 20b, 20c, 20d) received by the another deflector element (9).
6. (currently amended) The stereomicroscope according to Claim 1, further comprising a deflector element (10) which is pivotable about a horizontal axis (13).
7. (currently amended) The stereomicroscope according to Claim 1, further comprising a deflector element (10) which is pivotable about a vertical axis (31).

8. (currently amended) ~~The A stereomicroscope according Claim 1, further comprising:~~
an objective;
a zoom system downstream of the objective;
a deflector element between the objective and the zoom system for deflecting observation
beams emerging from the objective into corresponding magnification or observation channels of
the zoom system; and
deflector elements (6a, 6b) downstream of the zoom system (7) for redirecting the observation beams (20a, 20b, 20c, 20d) along a horizontal direction that is substantially opposite to a horizontal direction along which the observation beams travel through the zoom system (7);
wherein the zoom system includes at least three substantially horizontally extending
magnification or observation channels.
9. (currently amended) The stereomicroscope according to Claim 1, further comprising at least one optical add-on component 8a, b, e having a horizontally or vertically extending optical axis.
10. (previously presented) The stereomicroscope according to Claim 9, wherein the at least one optical add-on component includes a stereoscopic diagonal inverter element.
11. (original) The stereomicroscope according to Claim 9, wherein the at least one optical add-on component includes a laser shutter.
12. (original) The stereomicroscope according to Claim 9, wherein the at least one optical add-on component includes an optical splitter.
13. (original) The stereomicroscope according to Claim 9, wherein the at least one optical add-on component includes a data projector.
14. (original) The stereomicroscope according to Claim 9, wherein the at least one optical add-on component includes a filter.
